

ENER-G Procurement Limited select eSight for their online energy management service

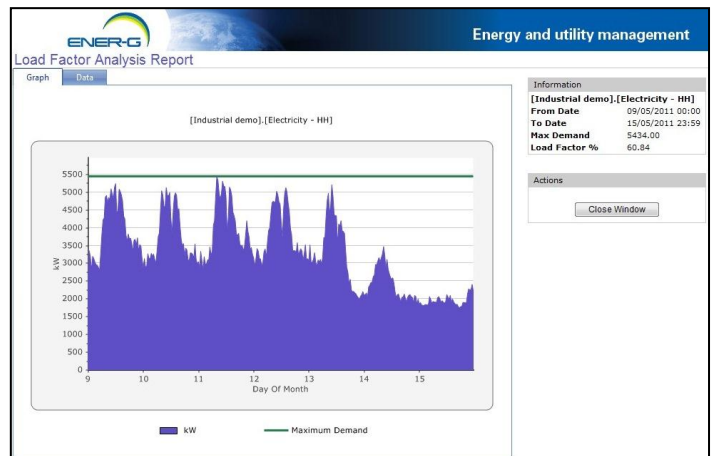

ENER-G Procurement Limited is a leading energy broker providing a comprehensive range of solutions to cost-effectively buy and manage energy, including independent energy and water consultancy, metering and data management, bureau services and energy efficient technologies. They have a broad client base & work with an impressive array of high street & blue chip organisations across the UK.

■ The Requirement

ENER-G Procurement required a solution to handle substantial amounts of energy data across a wide portfolio of client estates. They needed a system whereby data could be imported from thousands of meters, whilst allowing their clients to access energy data in a simple and straightforward way.

ENER-G Procurement needed a solution that would enable its energy consultants along with their clients to analyse load factor, energy consumption and costs and identify energy efficiency improvements. They also needed to be able to benchmark sites, implement exception reporting and set alarms to alert sites to potential overspending.

It was also important to find a solution whereby ENER-G Procurement could effectively incorporate an energy monitoring service (aM&T) into their portfolio and offer this service to their customers.

"eSight has provided us with the crucial ability to manage bulk data in an automated and controlled manner across a wide portfolio of clients with multiple sites"

Dr. Cedric Rodrigues

Managing Director – Energy Management Division,
ENER-G Plc.

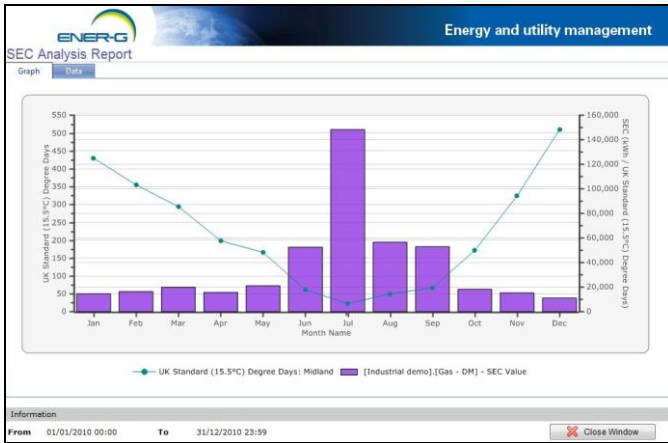

■ The Solution

ENER-G Procurement chose eSight Energy's fully web-enabled energy suite eSight for their online energy service; opting for the Enterprise version which caters for systems with in excess of 1,000 meters. In addition, eSight Energy hosts eSight for ENER-G Procurement making it available over the Internet.

With the option of eSight Energy hosting eSight, there is no need to install any software to the client site. eSight can be accessed simply via Internet Explorer from any PC. ENER-G Procurement has implemented eSight for the management of many thousands of meters. Due to the scalable nature of eSight, ENER-G Procurement are able to continually add additional meters to the system as their customer base grows.

As eSight is a system comprised of 12 modules, ENER-G Procurement were able to select those most relevant to their business, making the entire package bespoke. Included within their selection were the Energy Analysis Module, the Benchmarking Module and the Exception Reporting Module.

eSight is available as a fully branded product suite with a number of standard branding options. ENER-G Procurement used this service to rebrand eSight as an ENER-G Procurement product.

■ Branding

ENER-G Procurement required a product which they could offer to their clients, branded in line with their corporate marketing requirements. By selecting one of eSight Energy’s standard options, re-branding was implemented in the optimum time possible. eSight Energy offers 4 levels of standard re-branding from simple company logo to a full OEM product.

■ eSight Express

ENER-G Procurement has a wide portfolio of clients with multiple sites and hundreds of users needing to access their data throughout the day. These users access eSight through eSight Express which has been designed to provide easy access to energy data for non-technical users of eSight.

eSight Express provides access to a selection of the functionality available within eSight, presented in a simplified user interface designed specifically with the novice user in mind.

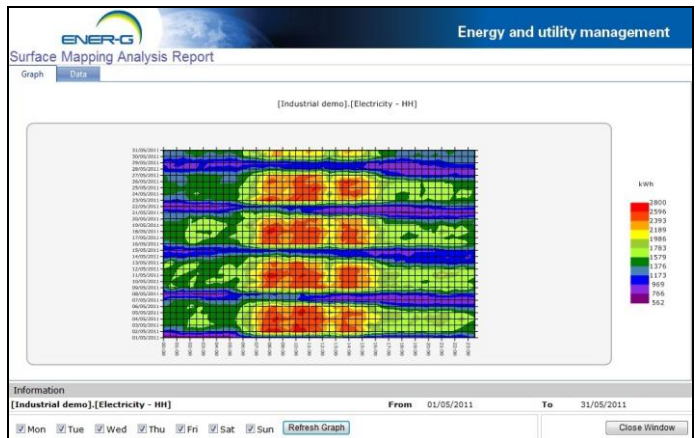

■ Accessibility

Due to the 100% web-enabled nature of eSight, access to data is available from anywhere via Internet Explorer. This has been of great benefit due to the diverse locations of ENER-G Procurement’s energy management staff across the UK.

ENER-G Procurement also utilises this facility with their clients. With eSight, administrators may define user rights to screen off data by company, site and even down to meter level; menu options may be turned on or off and drop-down boxes configured by the administrator with ease. This means that ENER-G Procurement’s customers are able to view and interact with their data, without compromising the security of other clients.

■ Energy Consultancy Service

The wide range of energy analysis techniques available within eSight allows the product to be used across ENER-G Procurement’s diverse client base spanning retail, manufacturing, education and local government by both internal energy consultants and end users.

“Being able to provide our customers with access to our energy suite Insight, across the internet, has increased the level of utilities management services we offer”

Dr. Cedric Rodrigues

Managing Director - Energy Management Division, ENER-G Plc

■ About eSight Energy

eSight Energy specialises in the supply of energy management solutions. Built upon the very latest Microsoft technology, eSight is our fully browser based energy monitoring and targeting (aM&T) suite. Comprehensive and intuitive, eSight provides an extensive range of techniques for managing all aspects of energy data effectively.

eSight may be used in conjunction with other products from eSight Energy for the collection and transfer of data between sites.

Please contact eSight Energy if you would like to receive further information about eSight, data logging and collection or pricing and licensing options for your organisation.

eSight is a registered trade mark of eSight Energy Limited.
